

Hybrid IC Isolation Amplifiers 20 Series

ISOLATION AMPLIFIER

(high-accuracy, input isolation, external synchronous)

Functions & Features

- Being used for printed wiring board installation
- Up to 1500 V isolation between input to output or power input
- High-linearity
- Small installation area in printed wiring board
- Gain adjustable range, $\times 1$ to $\times 10$
- Powered with external Clock Generator (model: 20VS5-2)

Typical Applications

- Isolating the field and input circuit of microprocessor to reduce noise from field
- Available for manufacturers of small-lot products to omit the development of isolation circuit
- Using external Clock Generator to eliminate the "beat frequency" interference at multi-channel outputs.
