FUNCTIONS

■ **HIGH ALARM:** When the signal input exceeds the preset setpoint, the relay provides a tripped condition.

• Hi Alarm

■ **POWER ON DELAY TIME:** The relay does not provide a tripped condition for a duration of the preset Power ON Delay Time (TDP) after the power supply is turned on, even when the signal input is in an alarm range.

• Power ON Delay Time (TDP) with Hi Alarm

■ **LOW ALARM:** When the signal input goes below the preset setpoint, the relay provides a tripped condition

• Lo Alarm

■ **LATCHING OUTPUT:** The relay does not return to an untripped condition once the signal input goes across the threshold, unless:

- (1) the Reset control button is pressed,
- (2) the Reset input terminal is closed, or
- (3) the power supply is removed.

• Latching Output with Hi Alarm

■ **ON DELAY TIME:** The relay status does not change until after the preset ON Delay Time (TD) once the signal input goes across the threshold.

• ON Delay Time (TD) with Hi Alarm
