RS-232-C CABLE

- When connecting a R2M directly to a PC, use a 'straight' cable. A short 'straight' cable is included in the product package.
- When connecting a R2M to a R1M or R2K-1, use a RS-232-C Interlink/Reverse cable.

This cable should meet the following conditions:

- Must include wires indicated in solid lines in the figure below.
- Must not connect between Pins No. 8 of the both connectors. (May cause failure)

Pin Assignments

The above example with solid and broken lines shows an 'interlink' type cable.

RS-232-C INTERFACE

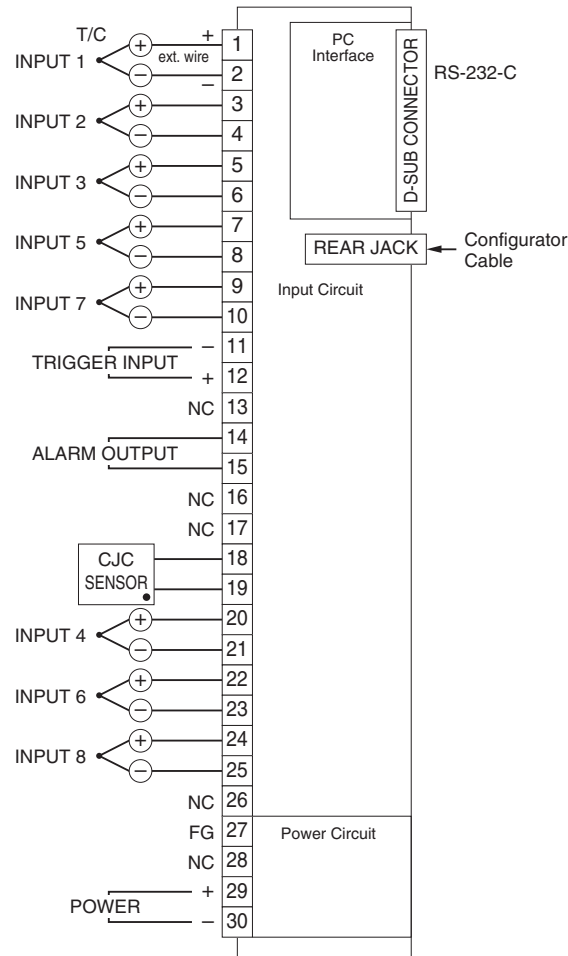

ABBR.	PIN NO.	EXPLANATION OF FUNCTION
BA (SD)	2	Transmitted Data
BB (RD)	3	Received Data
AB (SG)	5	Signal Common
CB (CS)	7	Clear to Send
CA (RS)	8	Request to Send
	1	Not Used.
	4	DO NOT connect. Connecting may cause malfunctions.

CONNECTION DIAGRAM

Note: In order to improve EMC performance, bond the FG terminal to ground.

Caution: FG terminal is NOT a protective conductor terminal.

Note 1: DO NOT connect the terminals 13, 16, 17, 26 and 28 (NC: No Connection).

Wrong connection may cause failures of the module.

Note 2: Use shielded twisted cables for the input or take other necessary measures so that there is no noise interference.

Thermocouples must not be grounded.

Note 3: Ground the terminal 27 (FG) for safety.

Note 4: The terminal 30 (Power -) and the signal ground (SG) of the D-sub connector are internally connected.

The terminal 27 (FG) is used to lead noise from R2M's I/O terminals to the ground. For protecting your PC and the R2M, we recommend that both the terminal 27 and 30 be connected to the PC's ground before connecting an RS-232-C cable between the PC and the R2M.
