FUNCTIONS

■ OUTPUT HOLD

The output function in case of a loss of communication is selectable with the side DIP SW: Reset the output (to -15 %), Hold the output (last normally received data) or Fix the output at a specific value (PC programming).

The output is held at -15 % of the output range until normal data is received at the startup.

■ OUTPUT WIRE BREAKDOWN DETECTION

In the case of wire breakdown, output error is detected.

Then, the status indicator LED blinks (0.5 seconds per cycle) and the flag of error is set on the PLC etc.

Note: Wire breakdown detection is applicable with Firmware Version 2.00 or later.

EXTERNAL VIEW

• Front View (cover opened)

• Side View

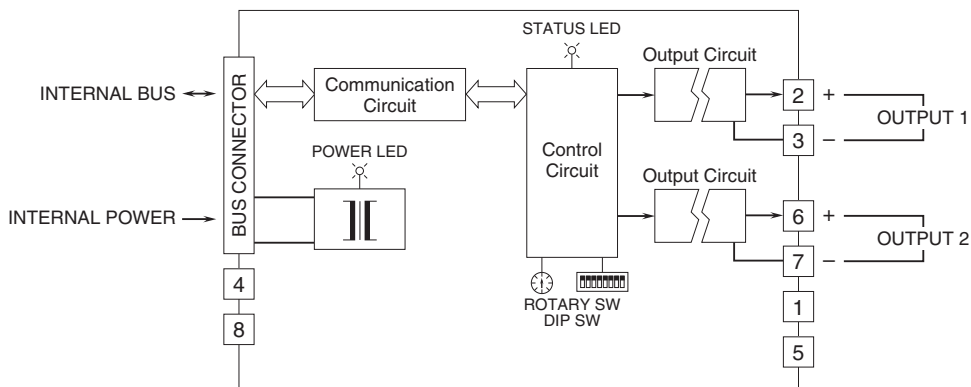

Refer to the instruction manual for setting procedures.

EXTERNAL DIMENSIONS & TERMINAL ASSIGNMENTS unit: mm [inch]

■ UNUSED OUTPUT TERMINALS

Install the attached resistor between the unused output terminals as indicated below.

If unused output terminals are left open, status indicator LED blinks in red (0.5 sec. cycle), and error flags are set in the PLC, etc.

Note: Output wire breakdown detection is applicable with Firmware Version 2.00 or later.
